

# CAREERS WITH DLX

**STIG INNOVATOR // DEPLOYED LOGIX**

As a STIG Innovator at Deployed Logix, you will play a vital role in designing and fabricating cutting-edge shelter solutions that cater to our clients' specific requirements. You will collaborate with our multidisciplinary Strategic and Technical Innovation Group, utilizing your creativity, problem-solving skills, and attention to detail to produce innovative and high-quality product designs and improvements. We are looking for a detail-oriented, inventive individual who thrives in a fast-paced environment and is passionate about delivering exceptional craftsmanship.

## **Responsibilities:**

- Collaborate with the design and engineering teams to develop creative and functional shelter and support concepts that align with client needs, project specifications, and industry standards.
- Utilize your problem-solving abilities and creative mindset to design and fabricate prototypes and first articles using various materials, tools, and techniques.
- Incorporate innovative and sustainable design elements into our product portfolio, considering factors such as structural integrity, ease of deployment, and functionality and cross compatibility.
- Conduct thorough research on emerging materials, manufacturing methods, and construction techniques to enhance the efficiency and quality of our products
- Work closely with engineers and technicians to test and validate product designs, ensuring compliance with safety regulations and performance standards.
- Maintain a high level of craftsmanship and attention to detail throughout the fabrication process, ensuring the delivery of superior quality products.
- Continuously iterate and improve existing designs based on client feedback, field performance data, and technological advancements.
- Stay up-to-date with industry trends, market demands, and competitors' offerings to identify new opportunities and stay ahead of the curve.

## **Qualifications:**

- Bachelor's degree in sculpture, architecture, industrial design, engineering, or other innovative discipline or 2-3 years of vocational school or work experience in related fields
- Proven experience as a maker, fabricator, or similar role, preferably within the disaster preparedness, construction or product design industry.
- Exceptional creative thinking and problem-solving skills, with the ability to generate unique design solutions based upon customer constraints.
- Proficiency in utilizing design software, prototyping tools, and traditional fabrication equipment.
- Strong knowledge of materials, construction techniques, and manufacturing processes.
- Detail-oriented mindset with a passion for delivering impeccable craftsmanship.
- Excellent communication skills to effectively collaborate with multidisciplinary teams and clients.
- Ability to thrive in a fast-paced environment while maintaining a high level of quality.
- Strong organizational and time management skills to handle multiple projects simultaneously.
- Ability to travel domestically and internationally for trade shows, customer demonstrations, requirements gathering.

Grow with us! Deployed Logix began in 2012 and is rapidly growing. With a loyal and developing customer base around the world, we pride ourselves on being a locally-owned business of quality, innovative products, crossing borders and oceans to carry on our mission of developing the best and fastest lifesaving products for first responders.

DLX is both a team-driven and a self-driven environment that thrives on the different skill sets that each member brings to the table. We are a family-oriented crew that invites partners and children of DLX team members to be part of our culture. We understand that work/life balance can be a difficult juggling act and we strive to provide a place where you can succeed in both.
